**GENERAL DESCRIPTION**

The SSD222 is a highly integrated SOC product for face access and smart display applications.

Based on ARM Cortex-A7 dual-core, the SSD222 integrates image sensor interface, advanced ISP, high performance JPEG encoder, 2D graphics engine, TTL/serial RGB display with adjustable picture quality engine and other useful peripherals.

A typical utilization of the SSD222 application processor is demonstrated in the block diagram. The completed system includes NOR/NAND flash, DRAM, SD card, and USB port, and diversified audio connection. Before output to the panel, the images can be enhanced with respect to brightness/contrast/saturation/sharpness to give the best picture quality.

The NOR or NAND flash is usually reserved for operating system and application software. Moreover, other peripherals like SAR ADC, Audio ADC/DAC, UARTs, PWMs, GPIOs and SPI are supported to realize applications with maximal flexibility.

The SSD222 supports secure booting and personalization authentication mechanism for securing system. The AES/DES/3DES cipher engines could also help encrypt the compressed video/audio streams for privacy protection.

The SSD222, powered by SigmaStar Technology, comes with a complete hardware platform and software SDK, allowing customers to speed up "Time-to-Market."
